Bitter split breaks Imagine

IMAGINE, the flamboyant Liverpool software company, whose financial problems have been deepening since February, is now insolvent.

Magazine publishers VNU petitioned for a winding up order to be brought against the company on Monday, July 2.

The crisis means that the future of Imagine's two Megagames is now uncertain.

The situation has been exacerbated by a bitter internal split between general manager Bruce Everiss and his co-directors Ian Hetherington and Dave Lawson. The position of Imagine's other director, Mark Butler is still not clear. Bruce

Everiss resigned as director and general manager at midday on Friday, June 29.

Central to the disagreement is a new company called Finchspeer set up by Hetherington and Lawson to raise funds. Hetherington, Lawson and Mark Butler each have a one-third share in the new company.

"They have set up Finchspeer in order to own Imagine's Megagames and assets for themselves," claimed Everiss. "They have a staff list of 20 people to join Finchspeer which means that the remaining 60 Imagine employees will

Tramiel ready to buy Atari

JACK Tramiel, Commodore's founder who resigned suddenly in January, now looks set to buy Atari.

No details of the proposed deal are yet available but Warner Communications, of which Atari is a subsidiary, is negotiating to sell the Atari Home Video and Home Computer Divisions to a new company set up by Tramiel, retaining only Atari's Coin-operated Game Division.

Warner Communications has been seeking a buyer for its loss-making subsidiary for almost a year. It originally bought Atari from its founder Nolan Bushnell in 1976 for \$28m and in 1982 the subsidiary turned in an operating profit of \$358m. However, the slump in US video game and home computer sales lead the company to produce an operating loss the following year of \$538.6m.

The heavy trading losses have reduced Atari's worth and the company is now valued between \$40 and \$120m.

Imagine's cofounders Mark Butler (left) and Dave Lawson

Paintings by Henry Bates. Reproduced by kind permission of The Tate Gallery, London.

SPECTRUM 48K**£5.95**

Once upon a time, Zeus had one of his master craftsmen fashion a mortal of perfect beauty — the first woman — he called her Pandora — meaning "all gifts". Zeus presented her with a golden casket, but bade her promise never to open it, but Pandora grew curious and one day she lifted the lid. With a rush and a cry, out came all the ills that now beset man, disease and sorrow, hate, jealousy, theft, lies and many more. Pandora rushed to close the lid, but all of its contents had escaped, save one, "Hope". Since that ill-fated day when Pandora infested the world with terrible woes and suffering, Hope has always remained a comfort to this troubled world — until now! Someone has stolen Hope, and famine, disease and violence have taken over the world.

Enter the magnificent and dangerous world of Ancient Greek Legend in this amazing hi-res graphic adventure. One-eyed giant Cyclops and the many headed Hydra are but a few of the incredible creatures you will meet as you sail treacherous seas and cross dangerous landscapes in your struggle to return Hope to its guardians on Mount Olympus, the home of the Gods.

BBC 'B' or ACORN ELECTRON**£7.95**

Guy of Gisburne, treacherous henchman of the Sheriff of Nottingham, has captured the lovely Maid Marion. In his heavily defended castle — he holds her as bait!

Become Robin of Loxley, the hooded man, on a mission of rescue and vengeance.

Written in 100% machine code and making full use of the sound, colour and hi-res capabilities of each computer, Gisburne's Castle blends the action of the arcade with the challenge of an adventure, into one outstanding game.

Features:

- * Hundreds of different graphic locations
- * 20 different animated and intelligent characters
- * 15 different objects to be found and used
- * Joystick option and user definable keys

How to submit articles

Articles which are submitted for publication should not be more than 3,000 words long. The articles, and any accompanying programs, should be original. It is breaking the law of copyright to copy programs out of other magazines and submit them here — so please do not be tempted.

Accuracy

Popular Computing Weekly cannot accept any responsibility for any errors in programs we publish, although we will always try our best to make sure programs work.

Editorial

Everybody knows that home copying takes place on a huge scale. And the software houses have had to accept it because there is nothing they can do.

Tape copier programs — the sole purpose of which is to 'unlock' any program protection built into a commercial package making copying easier — are an easy focus for the larger of the software houses.

Justifiably too — companies selling tape copiers are parasitic. Indeed, they may even be inciting people to commit a breach of copyright law.

Software houses threatened to boycott the last ZX microfair if companies selling tape copiers were allowed to exhibit. This magazine doesn't carry ads for tape copiers, partly because it doesn't seem right to do so. But now there is a new and even trickier question to be debated; the question of tape-to-Microdrive and tape-to-disc copiers.

Unlike tape copiers, these cross-medium copiers have a purpose other than piracy. Anyone who has bought a ZX Microdrive or disc drive will wish to transfer their programs onto the new medium. Tape-to-microdrive or disc-copiers make this possible.

A desire to transfer software from tape to a more convenient form is entirely justified. The problem is that, having made one microdrive or copy, you can make another, and another.

As yet there is no satisfactory answer to the problem. Sinclair sent a letter to all the software houses instructing them to include a Microdrive copy facility in their cassette software — a suggestion which was met with a stony silence. Acorn had by far a better idea of offering discounts on disc software whenever the original cassette version was returned.

So far only the Acorn system looks remotely workable. And until such time as a solution is found the existence of cross-medium copiers is justifiable because they fulfill a genuine need.

POPULAR COMPUTING WEEKLY

Imagine

continued from page 1
simply be discarded.

"Ian Hetherington and Dave Lawson are in the States to raise funds for Finchspeed. Imagine will not see this money."

Speaking from the US on June 29, Ian Hetherington refuted this. "Dave Lawson and myself have been in Silicon Valley trying to raise money for Imagine for the last two weeks. We set up Finchspeed as an off-the-shelf company to get money into Imagine. There is no point in discussing Finchspeed, since it is dead and buried. It's forgotten."

However, at an extraordinary General Meeting of Imagine's shareholders on July 1, a contract between Imagine and Finchspeed was approved by a majority of those present.

This contract gives Finchspeed the copyright of the Megagames and the use of Imagine's premises, and Imagine's assets. Finchspeed will pay Imagine £40,000 for equipment needed to develop the Megagames and then 50 per cent of the net profit from the games up to a maximum of £625,000.

The question is whether the deal will save Imagine: "At

present, Imagine owe about £400,000," said Bruce Everiss. "That includes £100,000 to the bank and £250,000 to Marshall Cavendish."

Ian Hetherington would not comment on the figures, other than to say that the figure for the overall amount owed is incorrect. He added, "We are hoping to raise £1.5m in the States, and this will cover all the debts and pay for the Megagames. We have been very close to clinching deals. It is important that the Megagames go out with Imagine's name on them, and I will do anything to ensure that they do."

As for the 60 staff left without a job according to Everiss, Hetherington commented, "Staff will have to be sacked who are now loyal to Bruce Everiss." He added that the personality clashes within the company had been brewing for about three months.

Imagine's two Megagames were originally planned to be launched with an extensive and distinctive promotional campaign. Marble slabs were to be laid in Hyde Park with the names of the games etched into them and the BBC were filming a documentary on their making.

The computer in your pocket

PSION — having written the four programs to accompany the QL — has now launched its own computer.

The Psion Organiser is smaller than a paperback book, costs under £100, runs off an ordinary PP3 battery, and is claimed to be "the world's first practical pocket computer".

It uses a Hitachi 6301-X processor which is a complete micro-on-a-chip device incor-

The basic machine at £99.95 provides five commands. *Save*, *Find*, *Erase* and *Enter* which allows data to be stored and retrieved from any cartridge. The fifth, *Calc* gives a calculator facility.

Psion is also offering, initially, a choice of three prerecorded software packs each priced at £29.95. These are *Maths*, *Financial* and *Science* packs. All three incorporate a new

porating its own operating system in a 4K Rom. It has 14K Ram on-board, but the device includes two built-in "solid state drives." These are twin CMOS Eprom cartridge slots for plugging in additional software. They have storage capacity of either 8K (£12.50) or 16K (£19.95).

Where the Organiser is unique, however, is that it can write to these Eproms. Incorporated in the unit is the ability to "blow" software into any blank cartridge plugged into the device. Information on existing cartridges can also be erased in the same way. Rerecording onto a used cartridge is not possible though, and to do so the cartridge must be reformatted either by a shop (£3.50) or by the individual using a special formatting device (£45).

Either of the cartridges can be removed and a special interface can be connected giving the Organiser a standard RS232C interface. This can be used to printout information to a printer or to dump data to another computer possibly even via a modem and telephone link.

programming language written specially by Psion for the Organiser called Popl. Popl provides and additional 14 commands including *If*, *Goto*, *Print*, *Copy*, *Free* and *Label*. Popl is a procedure-based language rather like Logo.

The Psion Organiser will be sold initially by mail-order beginning in July. The company is at present manufacturing between three and four thousand machines a month and does not anticipate selling it through stores until 1985.

The machine will also go on sale in the US in Spring 1985 and Psion has established Psion Inc a US subsidiary based in Fairfield County, Connecticut, headed up by a former Timex employee, Bill Skyreme.

Psion has also announced that enhanced versions of its QL packages will be launched in August for the IBM PC and XT, the Apricot machines, and the Sirius and Victor. Versions for the Apple Macintosh and Dec Rainbow will follow in the Autumn. All the so-called Xchange packages will sell for over £500.

Psion plans a share flotation onto the USM in Spring 1985.

Galactic join Mastertronic

MASTERTRONIC, the software company whose £1.99 games have proved extremely successful, have set up a joint venture company with Galactic Software.

"The new company is called Artificial Intelligence Products, or AIP," said Martin Alper, managing director of Mastertronic. "It will function as a programming house for new Mastertronic games."

The deal constitutes a virtual takeover for Mastertronic, since Galactic now no longer exist as a marketing entity. "Galactic did a lot of programming work for us in our early days," continued Martin. "AIP will give us a much wider range of software."

The first two games from the AIP team will be launched in two to three weeks — *Chiller* (which is loosely based on Michael Jackson's *Thriller* video) for Commodore 64, and *Psycho Shopper* for the expanded Vic 20.

New Apricot under £1000

ACT has announced a new range of computers, with the lowest-priced model costing under £1000.

At £915, the Apricot F1E uses the 8086 processor and offers 128K Ram, a single 3½inch disc drive and bundled software including CP/M-86, Basic and Logo.

Bargain Beeb

ACORN is running a promotional offer on BBC B machines for the month of July.

For £399, the normal cost of the micro, buyers will also receive a BBC data recorder and five free Acornsoft programs.

This is the first time Acorn has been involved in any special offers regarding its machines.

"July is a particularly slack time of year," commented an Acorn spokesman. "It is hoped that we can generate extra sales from the promotion."

OF ENDURANCE...

...an Olympiad spectacular from
Software STUDIOS

Lord of the Rings to follow Hobbit

NEARLY two years after the release of *The Hobbit* adventure game, Melbourne House is able to begin work on a version of *The Lord of the Rings*.

Until recently, the video rights to Tolkien's trilogy, the sequel to *The Hobbit*, belonged to the US company Fantasy Films, who produced an animated film of part of *The Lord of the Rings*.

Now, however, the rights have been acquired by Allen and Unwin, publishers of both of the Tolkien books, which has given Melbourne House an option for a computer game version of *The Lord of the Rings*.

As with *The Hobbit*, Allen

and Unwin and Melbourne House will work in close collaboration.

"Melbourne House will have editorial control over the game, within the rough guidelines, but obviously we will be closely involved on questions of concept and design," said David Fielder, editorial director of Allen and Unwin.

Allen and Unwin is not discounting the possibility of supplying books to accompany the game. "Providing the three books with one game would be unfeasible — in fact, I suspect a computer game on *The Lord of the Rings* in its entirety would also be impossible. It is more likely that more than one game will be produced, together with

more than one book," continued David.

Melbourne House's publicity manager, Paula Byrne, confirmed that Melbourne House would be taking up its option on *The Lord of the Rings*.

"It will be a long time before any game based on the work appears," she said. "Because the option has only just been agreed, we have not yet begun to consider how we will approach it."

■ Melbourne House has also confirmed September 11 as the date set for the launch of the long-awaited *Sherlock Holmes* for the Spectrum and Commodore 64.

Baxter leaves Commodore

COMMODORE UK will be facing a major reshuffle in August. The company is moving premises from its present offices in Slough to the new plant in Corby.

There will be several changes of staff, the most notable of which will be marked

John Baxter

ting director John Baxter's departure to Andromeda Software.

"John will be taking up a position as a director of Andromeda to the end of August," said a Commodore spokesman.

QL upgrade — date set

SINCE Sinclair began deliveries of the QL at the beginning of May, three different versions of Superbasic have been sent out with machines.

"The first version issued to customers was FB, which was a penultimate version of the firmware," said a Sinclair spokesman.

"The other versions, PM and AH, are almost identical, but AH is the final version,

Red Shift slugs it out

RED Shift, the war games specialist company has suffered a split. The five-strong programming team — Julian Fuller, Julian Gollup, Clive Norman, Helmut Watson and Joe Capricorn — has set up a freelance group, to be called Slug.

"We will now be selling our games to other companies. While we will continue with war games we hope to branch out into strategy games in general," said Julian Fuller.

Negotiations with The Games Workshop and K-Tel

and an improvement on the others."

To find out which variant is on a given machine, users should type in *Print Ver\$*. The name of the variant should appear on the display.

Sinclair began delivery two weeks ago of QLs with the Eprom inside the machines rather than inserted in the Rom cartridge slot.

Machines delivered from the end of July should have the Superbasic in Rom rather than Eprom.

The conversion of QLs with 'dongle' Eproms is also scheduled to begin at the end of July.

"Our intention is to stagger the recall of machines," the spokesman continued, "and, as yet, we do not know how long customers will be without their QLs when recalled. The service will be absolutely free to customers."

Left to right: Julian Fuller, Clive Norman, Helmut Watson

are currently in progress, and Slug will be writing two games — *Battlecars* and *Talisman* on the Spectrum for The Games Workshop. The games are due for release in Spring 1985.

Amstrad gets JSW

SOFTWARE Projects will be converting its top-selling games *Manic Miner* and *Jet Set Willy* for the Amstrad CPC 464.

Palace play dead

PALACE Software has launched *The Evil Dead*, an arcade strategy game based on the notorious film of the same name.

The game follows the plot of the film fairly closely. The user controls one of the group of five friends staying in a lonely

"Tennessee shack" only to find themselves turned into zombies and ghouls by the curse of the *Evil Dead*, who inhabit the house.

You must use objects you find scattered in the house to attack and thwart the evil spirits to save your companions.

The Evil Dead should be available by the end of July on the Commodore 64 at £6.99. Versions for BBC B and Spectrum will follow.

Star turn for Mirrorsoft

MIRRORSOFT is the latest company to produce an astronomy program — *Starseeker* for the BBC — which has been given a seal of approval by the London Planetarium.

The program will give astronomical data on any chosen star, as well as the usual night sky screen.

It will also output data on the planets and trace the path of Halley's comet, in time for the comet's next appearance in 1985.

"The program was written by Paul Phillips, a Fellow of the Royal Astronomical Society," said Mirrorsoft general manager Jim Mackonochie. "We were so impressed with it that we took it to the Planetarium to hear their views."

Apart from giving advice and comment, a member of the Planetarium will also be writing the foreword to the manual accompanying *Starseeker*.

Chasm

If what's lurking down in the Chasm turns out not to be friendly then you will have only your 16K Spectrum and R Grimwood to blame

Your mission, now that you've chosen to accept it, is to pilot your tiny craft through the enormity of the Chasm. Important points to remember are that you mustn't fly into the walls of the channel or plough into any of the unsuspecting little life forms that you may find along the way.

Program notes

1-37	Instructions
45-60	Defines the variables
115-200	Selects the stage of the game
280-330	Determines the craft's movement
340-1000	Checks

Sub-routines

1300-1340	Detects a collision with alien
1500-1530	Shooting about the place
1700-1720	You win!
7200-7300	Detects a collision with wall
7500-7580	Better luck next time
8000-8018	User-defined graphics

Beyond midnight

Graham Taylor talks to Terry Pratt of Beyond Software

Until recently Beyond were yet another software house that seemed destined for a pretty quick oblivion — it was spending a lot of money on adverts for games that were, at best, average and at worst terrible.

We journalists (all knowing beings from the plane of darkness) sniggered to ourselves and put them on the vast list of 'companies most likely to... (go broke).

But then came two games that changed all that. *Psytron* and *Lords of Midnight* were both games of great technical excellence — more than that they were genuinely original and great fun to play. In fact, people are only starting to scratch the surface of *Lords of Midnight*, new possibilities are being discovered and new ways of playing it are being developed.

It seems like something went right but in point of fact nothing ever went wrong. "The first games were always a preliminary stage just to test the water, Beyond only really took on any staff in April," explains Terry Pratt the manager of Beyond and the person responsible for its setting up and overall development.

Terry is a classic example of putting your money where your mouth is, (actually someone else's money but his credibility). Prior to Beyond he was the editor of the still flourishing *Computer and Video Games* magazine. "I suggested vaguely to the powers that be the idea of doing some software after seeing the quality of some of the stuff we were getting in on the magazine but I never expected to be looking after a separate company!" Most of Beyond's early releases were written by a C & VG contributor Ron Potkin.

"I will admit that one thing that spurred me on was, when I was on the magazine, the hash I had seen other people make of running a software house — I thought I could do it better. We're succeeding now but it certainly was much more difficult than I thought."

"... I thought I could do it better"

First of the 'biggy' games was *Psytron*, a complex game with no real antecedents. In a way it does for strategy/managerial games what *Valhalla* did for adventure games, ie, make them strongly visual with detailed, animated graphics without losing the original strategy flavour.

"*Psytron* was fought over by a number of companies and for various reasons its creators chose us rather than another company." One of the companies known to have seriously considered *Psytron* was Psion although, in the event, they seem to have decided it wasn't right for them.

"Paul Voysey, one of the creators of the *Psytron*, says that they consider the game to have been their *Space Invaders* and they are now at work on *Psi Warrior* which will be their *Manic Miner*, but I know companies always say things like that."

His voice trails off apologetically — it can't be easy having been a hack (cynical to the last man) and now required to do interviews as a manager (ebullient, enthusiastic, self and company promoting, and unrealistically optimistic to the death).

Good as *Psytron* is, my guess is that *Lords of Midnight* is the game people will still be talking about in ten years time. Like *Psytron* it isn't really much like anything else but is a curious mixture of adventure and strategy.

Set in the Land of Midnight you have to control the armies of the Free against the forces of the Foul — the vast area of the game is mapped out and presented on screen with a true 3D logic: ie, if you see a

"... more difficult to recruit armies..."

lower in the distance and head towards it, next move it will be bigger and nearer. You move initially four characters, each with different strengths and weaknesses, across the land trying to recruit larger armies to your cause, finding useful objects and battling it out with the dark forces which are controlled by the computer.

Different places have different properties — some are magical, others may provide limited rest and shelter. I know people who have been playing it for weeks who are still only beginning to get to grips with its possibilities.

It was written by a long-time Dungeons and Dragons/adventure fan Mike Singleton. Among his other creations is *Starfall* a complex multi-user wargame currently running on the Micronet teletext network. "I knew Mike from C&VG days — I was keen for him to work for us. Curiously enough, he started with some arcade ideas but somehow, as we talked, a new idea emerged — it was going to be a game involving linked islands."

The first person to complete *Lords of Midnight* will have the entire story of their battle with the forces of darkness (every battle is different) turned into a fantasy book, a concept that can be guaranteed to make the average adventure fan start talking in elvish.

Lords of Midnight is, however, only the beginning of a three part trilogy — the second section is well planned and is expected to follow later this year. To be called *Doomdark's Revenge*, it will conti-

nue the story.

"There are quite a number of differences between *Doomdark's Revenge*. For one thing it will be a lot more difficult to recruit armies to your side." The basic plot is that Morkin has been captured by Doomdark's daughter and the others must rescue him. Chief among the goodies is the daughter of Lord of Dreams, Tarithel who is in love with Morkin (but is no wimp). The game is set in lands to the north of Midnight. "We're hoping to do a little more, technically, as well — Mike thinks he may be able to get a third background colour out of the Spectrum." This game will eventually be followed by the final section of the trilogy, *The Eye of the Moon*.

Returning to *Lords of Midnight* I asked Terry if he could offer any general advice to these people trying to play it as an adventure. "Morkin must pick up certain characters, one in particular, although I'm not saying which! Another bit of advice is that not all the Doomdark armies are the same. Some are hunter armies who will always chase a particular character — you can use them as decoys to take the pressure off Morkin."

Both *Psytron* and *Lords of Midnight* are for the Spectrum, but Commodore 64 versions are planned: "A 64 version of *Psytron* is definitely under way and work on *Lords of Midnight* is starting soon." I asked Terry about support for other machines: "We'll always look at new machines but the market is so difficult for them — look at how much material is already around for the Spectrum and 64 — I think that at least as far as this Christmas is concerned we'll only be supporting the two machines."

The interview essentially over, Terry is forced as are all the subjects of Streetlife interviews to have his picture taken by *Popular's* own lensman David (Bailey) Kelly. Terry looks very gloomy about the prospect, particularly when he is made to stand in a corner of the office in an awkward position. Smiling grimly, Terry's picture is taken: "You journalists don't know how lucky you are," he says wistfully. I think he'd choose to take on the hordes of Doomdark any day.

SHOCK! HORROR! SCANDAL!

SHOCK! CITYATTAK. The seven screen, all action machine code game. Superb graphics, smooth game play, a tough challenge for even the hardened arcade action addict. Now available on disk.

HORROR! The journey of your life ... or death! ODYSSEY. Described by Popular Computing Weekly as: 'Addictive with superb sound effects. An arcade game worthy of Jeff Minter for its pure speed of action!' Pick of the week (12th - 18th April 1984). Now available on disk.

SCANDAL! IT'S ONLY ROCK'N'ROLL. Your chance to succeed where millions of hopefuls fade. To make the big time in 'Showbiz' and show the world that you're a superstar, not just another dreamer. Now available on disk.

 **K-tel** Software is available at

Larger branches of John Menzies, Boots, and Computer Dealers nationwide.

The Key To Success!

Now, with the new Stonechip Spectrum Keyboard, the user has no worry of damaging the Spectrum itself as improved designing enables it to fit the case perfectly.

Assembling the case is simple as it consists of two halves, the top half containing the keyboard, with a small printed circuit board, attached by ribbon cable, plugging into the rear of the Spectrum. The lower half fits precisely around the Spectrum, thus preventing any risk of damaging through movement.

Your Sinclair guarantee need not be invalidated since the Spectrum does not require removal from its case.

THE MAIN FEATURES OF THE KEYBOARD ARE:

- ☐ No modifications to Spectrum necessary as it connects via rear port.
- ☐ Full-length space bar.
- ☐ Built-in 'Echo' amplifier and tape interface.
- ☐ RESET keys remove the need to disconnect power supply lead.
- ☐ Single key 'DELETE'.
- ☐ Single key 'Extended Mode' selection (ie one key replaces the CAPS SHIFT and SYMBOL SHIFT function).
- ☐ Fully compatible with Interface 1 and most peripherals.

Music micro please

In the first of an occasional series on micros and music **Graham Taylor** looks at the Casio MT-200 keyboard and Centronics interface

Recent months have seen micros and musical instruments linking as never before.

In the past music programs have enabled computers to be used as simple organs or synthesisers combined with music editors which enabled (usually) up to three notes to be stored or played at the same time and manipulated in various ways.

To varying degrees such programs can be useful for learning about music and even simple composition, but there is one big problem so far as actually treating them as a sensible musical instrument is concerned — no keyboard!

One solution is the development, in recent months, of interfaces which enable you to connect your home computer, if it's a BBC Spectrum, or Commodore 64 to a Midi keyboard. For those unfamiliar with Midi it is a standard, like Centronics which enables different keyboards from different manufacturers to be connected together and used to control one another. It can mean, for example, that a digital drum machine can be played from the keyboard of a separate synthesiser. So far as home micros and Midi is concerned, connecting the two enables the computer to be used as a memory store of note information and as a sequencer — repeating stored sequences of notes over and over for use as a rhythmic basis for music. Donna Summer's *I Feel Love* is probably the classic example of the type.

All this is pretty wonderful except for the

fact that Midi keyboards start at several hundred pounds — much more than the computer. Not ideal for the dabbling beginner. The solution for the budget conscious computer fan who wants to play music but

doesn't want to spend too much money comes from Casio — well known for its range of cheap home keyboards which straddle the bridge between simple organs and synthesisers.

The MT-200 is an electronic keyboard which functions as an instrument independently from any computer link. It costs £129 and is worth evaluating purely on its own. You get a four octave keyboard with small but playable keys. There is a choice of eight preset voices labelled things like clarinet, organ, oboe, vibraphone, etc. and six rhythms — such as like Disco, Rock, Slow Rock, etc.

A word here for those not familiar with portable keyboards. Not one of the sounds is the slightest bit like what it's called, except Organ which sounds like some sort of organ. In fact, to varying degrees and in different ways, the sound are like organs. They are nevertheless rich and generally speaking, useable. The same is true of the rhythm unit, it sounds a bit, well, artificial.

On the other hand that doesn't mean I don't like it, the sound can actually be appealing just because of its 'plastic' quality. As a keyboard pure and simple the MT-200 is pretty good for the money; no earth-shaker, but fun.

However, on the side of the keyboard is a small plate behind which hides a connection onto which slots a funny white block called a PA-1. This device is a standard accessory to the MT-200 costing £29.50.

The PA-1 is where the interest for micro owners starts — it is a standard Centro-

nyics interface to connect the MT-200 to any computer which has a Centronics port built in or can be connected to one as a peripheral, eg. the Spectrum.

Using the Centronics interface your computer can now control the keyboard with spectacular results. The keyboard is operated by standard Ascii characters which are simply printed down the Centronics line. This means that writing programs using the

keyboard is simple. Notes are referred to by name and octave number and are switched on just by printing this code. Up to eight notes can be switched on simultaneously as can rhythm and preset tones,

although at any given moment only one tone can be used.

If you send certain even numbered note values, listed in the manual, you will find that the notes will play in time with the rhythm unit — more technically they will be using the same clock (a sort of electrical timekeeper) for their timing. This means that, using the device with simple Basic programs, notes and chords can be played in perfect time with the rhythm. Better still, if you are using less than eight notes under computer control you can still play the keyboard in the normal way playing as many notes simultaneously as are left from the eight allowed. You can have the computer playing four-note chord sequences whilst you play anything up to four-note chords directly on the keyboard.

Alternatively, the computer can play a one-note base line and you can play up to seven notes simultaneously on the keyboard.

This opens up tremendous musical possibilities which, apart from the restriction in tone types, are usually only found on very expensive keyboards. Shove the whole noise through a reasonable amp and you will be pretty amazed at how impressive it can sound.

At the moment there is only the information in the PA-1 interface manual to go on, which is just about enough to write Basic programs. In the back of the manual is a fairly substantial Basic listing that provides a complete music editor for the interface — the only problem being that it is written in the Basic used on Casio computers which is vaguely BBC and vaguely Microsoft so it will need quite a bit of conversion, whatever your machine.

However, Casio have now realised the potential of the PA-1 interface and are busy as fast as they can commissioning software houses to write proper software using the interface. This augurs well for those of us whose Basic isn't good enough to really get the most out of the interface.

If the idea of playing music on your micro appeals then the Casio MT-200 + PA-1 interface is one of the cheapest and easiest ways to start.

fact that Midi keyboards start at several hundred pounds — much more than the computer. Not ideal for the dabbling beginner. The solution for the budget conscious computer fan who wants to play music but

WE'VE GOT THE TALENT- and our games prove it!

Amazing graphics, fast and furious action, challenging strategy, compelling adventure - this first wave of games from TALENT has got the lot!

Written by professional computer scientists using powerful new programming techniques (which leave machine code behind!) these games have pushed home-micros to the very limit!

Floating urns

Program *Danger Ranger* **Price** £9.95 **Micro** Commodore 64 **Supplier** Microdeal, St. Austell, Cornwall, PL25 4BR.

Danger Ranger is a very simple arcade-style game from Microdeal.

It consists of two games screens which you have to

avoiding drops of deadly acid which fall from the ceiling or rise from the floor (what happened to gravity?)

Straightforward to play and really not very exciting — after completing the two screens, you start right back at the first one again. This time it is a bit more difficult, eg the urns shoot at you more often. And so it continues up to the fifth and most difficult level.

There is one nice touch — you can select a practice op-

Fiendishly clever

Program *The Complete Machine Code Tutor* **Price** £14.95 **Micro** BBC **Supplier** New Generation Software, The Brooklands, Sunningbank, Lycombe Vale, Bath BA2 4NA.

First things first — this isn't a complete tutor. It is a magnificent and fiendishly clever aid for revising and consolidating your knowledge of BBC Assembler.

The pack includes two cassettes and a reference booklet. On the tapes are 24 lessons about Assembly Language: these are very brief and proba-

bly inadequate for a complete novice. But if you know a little about the subject they are a great way to brush up. What makes this a super deal is the exercises which follow each lesson. You are given a short Assembler program and a display showing the contents of various 6502 chip registers. You can run this, modify it, watch step by step what happens as it runs — and you can't crash the system!

Paul Bunn has written a colourful, clear interactive computer teaching package — the best I've come across in any field.

Jan Watterson

negotiate your way through controlling a little figure armed with a laser gun — isn't everybody in arcade games!

In the first screen, ten keys have to be collected from several platforms, while avoiding floating urns, which shoot, and radioactive bats and roving eyes, which don't.

The second screen involves collecting treasure chests while

tion, which enables you to play the game without losing any lives.

Bearing in mind the high standard of so many of the games available now for the C64, I'm afraid I expect more than this. Particularly since it is on disc.

Richard Corfield

Red for no-nos

Program *The Kingdom of Klein* **Price** £7.95 **Micro** BBC **Supplier** Epic Software, 10 Gladstone St. Kibworth Beauchamp, Leicester LE8 0HL.

This is one of a series of adventures from Epic — long, machine code programs describing fantasy lands and a challenge in the form of a treasure or monster to be found. It is a traditional adventure with the useful facility of saving a partially completed game (a feature sadly lacking in some adventures). The text is presented in colour — red for no-no's, green for go. The scenario is a search for the Magic Klein Bottle which has been stolen by a witch.

There were a couple of small irritations — I spent a lot of time typing N.E.S.W because the descriptions did not include exits from each location; and some of the commands had to be very precise before they were accepted, eg UP and CLIMB LADDER was accepted.

Adventures are very like crossword puzzles in that the form is usually the same, but the interest for aficionados is in the extent and complexity of the problem presented. Once solved, the game becomes useless. The sheer size of this one should provide even adventure freaks with several hours of fun.

Jan Watterson

Rolling logs

Program *Cuthbert in the Jungle* (disc) **Price** £8.00 **Micro** Commodore 64 **Supplier** Microdeal, St. Austell, Cornwall, PL25 4BR.

Adventure games with a jungle setting seem to be increasingly popular — one of the latest for the Commodore 64 is the disc version of *Cuthbert in the Jungle* from Microdeal.

ping or by grabbing a rope and swinging over them. Alternatively, you can climb down into the underground passage which runs underneath the jungle, but this is not without its perils — it contains a deadly scorpion and is sometimes blocked by a brick wall.

The various obstacles and treasures are spread over no fewer than 120 screens. This would be very impressive except that all the screens use the same background with only the arrangement of the hazards,

In this *Cuthbert*, who has appeared in some previous games from the same software house, has to find his way through the jungle in search of some treasures, for example a pot of gold and a golden chest.

The jungle is however full of hazards — fires, snakes, tar pits, crocodiles and rolling logs. These can be avoided by the usual means of either jum-

two or three per screen, being changed. Despite that, the game is quite good fun and the number of screens means that it will take a long time to master fully. Surely it could have had better graphics, though.

Richard Corfield

The Spook

ghost and the last person to enter the fort. This seems to appear if you spend too long in a room, so the best thing to do is to read about as last as you can. If you collect all the treasure on any level, the game is certainly up to the next stage.

This game is certainly up to the high standard now expected of games for the 64. It has well presented title, high score and instructions screens, and the quality of the graphics on the games screens is very good.

Cluster Missiles

Program *Jungle Trouble* from Durrill Software, Castle Green, Taunton, Somerset TA1 4AB. £5.95 Micro Commodore 64. £3.95 Micro Commander 64. Supplier Melbourne House, Church Yard, Tring, Herts. HP23 8JU.

Fans of the good old-fashioned alien shoot-out style of arcade games will enjoy it well, the graphics are very

Run of the mill

these aren't your run of the mill puny poultry — you lose a life each time they manage to get to you.

Although some elements of the game are not new, it is certainly very good fun, especially the more difficult levels, where the sight and sound of the furtive whizzing around the hen house at high speed is really comical.

Despite enjoying the game, I must have a mean about the loading of the program. It may be that we were just unlucky and we had a slightly dud cassette for review, but unfortunately the loader (one of the speed loaders for the 64) was unacceptably unreliable. It took no fewer than eight attempts to load the game the first time.

Opinion Poll

Program 1984 Price £6.50 Micro BBC B Supplier Incentive Software, 54 London Street, Reading RG1 4SQ.

Calling all megalomaniacs! Fancy running the country single-handed? This package by ■ Carter and S Crocker

point ■ just after the budget when you receive the results of a poll on your popularity. are clear graphs and good use

What makes this a very special game is that it offers quite a complex model of the British economy. The details are given in the accompanying booklet *Pocket Guide to Running Britain* which should be bedside reading for every Cabinet

offers you that very dubious pleasure. Actually, you only run the economy but that affects everything else.

1984 is a 'kingdom' game where to survive you have to make a series of choices. You choose bank rate, taxes, government spending and negotiate on wages. If you go too far in any direction, it's curtains. In this case the annual crunch

member The presentation is excellent: a series of clever wipes clears the screen with horizontal movements, there of colour to separate items.

It is a teaching game, I think — certainly I learned that being Chancellor is the last job I would ever want.

David Watterson

Power Pills

Program Pacman Price £24.99 Supplier Atarisoft, Atari International, Atari House, Railway Terrace, Slough, Berks

At last here is *Pacman* from Atari for the Vic20! ■ must be one of the most sought after pieces of Vic software and ranks along with such veritable arcade giants as *Donkey Kong* and *Centipede* also released from Atarisoft. As any computer buff will tell you, any software from Atari ■ to be followed to the ends of the earth.

This cartridge is grossly over-priced at £24.99 which is arguably not worth the luxury of instant data retrieval. *Pacman*, as you will probably know, is a game in which you

play the title role by guiding a small 'pie chart' like figure round an endless labyrinth while avoiding a marauding gang of ghosts.

However, you can get the upper hand by eating a 'power-pill' after which the tables will be turned and it will be the ghosts who run from you.

As is the whole Atarisoft range, the software is well presented in a cardboard box which makes the package more attractive to the consumer, but this also ups the price. Overall, the game has excellent graphics, fast and colourful, and the game also makes good use of the Vic's rather meagre sound capabilities

David Miller

Floating Point

Program Pascal 4T Price £25.00 Micro 48K Spectrum Supplier Hi-Soft, 13 Gooseacre, Chaddington, Leighton Buzzard, Beds LU7 6SR.

Pascal 4T from Hi-Soft for the 48K Spectrum consists of about 22K of machine-code.

Though the accompanying manual does not set out to teach you Pascal, it shows you some of the things which may be done with it and how to use the powerful editor included in the program. As well as the main program, there is a Pascal version of turtle graphics using the Spectrum's colour and high resolution screen.

Roger Thomas

In The Bastille

Program Les Flics Price £6.95 Micro Spectrum Supplier PSS, 452 Stoney Stanton Rd, Coventry.

Les Flics takes a very successful cartoon/film idea and converts it into an original and highly entertaining game. This is an arcade adventure in its truest sense — you need to have arcade reflexes, and the mind of an adventurer to do well. It starts off with you in a maze of streets, being followed by police cars; even at this early stage, you can't afford to hang around for very many seconds unless you want to end up in the Bastille for the rest of your life!! Dotted around the maze are various doors which you

As Pascal is a compiled language there is a speed increase of well over twenty times over Basic. When you consider that this is using floating-point numbers you will realise the power of the compiler.

Hi-Soft's *Pascal 4T* is a full implementation of Pascal — not a version of what is called Tiny Pascal. Also, the object code it produces is true Z80 machine-code, not P-code which runs at a much slower rate. There is no Basic computer which can match it for speed. This package is great value for money for anyone interested in finding out more about Pascal.

pyright) and you have to move around the various floors of the building in search of numerous objects.

At this stage, the graphics are particularly good, and the game still hard. Each building is different, and contains numerous things for you to collect or do. The most important thing I have discovered so far is that duggers are useful to get out of trouble with the gendarmerie.

The game lets you use either joystick (Kempston or cursor key) or the keyboard. It is nicely packaged in a box, and has limited enough instructions to be frustrating — and addictive. It is clearly one of the new breed of supergame which cost slightly more money, but can be expected to last a long, long time. This deserves to be a top seller, so I hope to see it in the

can enter. Once inside, you become the Pink Panther (or, something exactly the same that, miraculously, avoids co-

charts soon.

David Lester

COMMODORE 64 BASIC BEGINNER'S PACK . . .

A subtle blend of software and book to enliven the duller of Commodore 64's.

The Software

Honey Aid 1: a complete utility that adds 28 new commands to Commodore 64 BASIC, in three groups.

- **Toolkit:** these commands help you to create your own programs in BASIC. One day you'll wonder how you did without them.
- **Graphics:** use colour and hires graphics with ease - decorate and colour your 64.
- **Synthesizer:** build all the SID chip's features into your program. No need for POKEs, just use Honey Aid's BASIC-like commands.

In addition - on the tape:

- **Char Gen:** a full-featured character generator that will redefine any or all of the standard 64 characters, even the ones used by Char Gen - while it runs.
- **Sprite Gen:** a sprite generator to define sprites - normal or enlarged, single colour or multicolour. Displays the sprite as it's defined. Transforms the design into DATA statements.
- **Composetune:** explores the SID chip. Allows you to type in a tune and to store this in DATA statements. Later, you can recover this to re-create the tune. Buildasound: lets you explore all the features of SID and hear them in action.
- **Guesser:** a unique computer-aided-simulation (CAL) of a number-guessing game. Demonstrates how each statement works and shows it all in action.
- **Hangman:** a full hangman game to provide entertainment and education.
- **Breakout:** a video ball game, break down the wall to score.
- **Blockade:** a two-player game, trap your opponent, they're trapped - you win.
- **Balltrap:** get the ball in the net to win - frustrating but fun!
- plus, plus . . .

The Book

A 360-page text that guides you step-by-step, through the 64's BASIC - learning as you go! Each piece of software on the tape (and many more) is developed stage-by-stage. Once the fundamentals of BASIC are mastered, the specialities of the 64 are introduced.

From a simple number-guessing game via a reaction-tester, a hangman game and three video games to character and sprite generators, the projects increase gradually in complexity. This unique approach ensures that you learn - and that learning is fun!

Sounding off

Dilwyn Jones sounds off 'syntactically' using his QL...Beep...Beep...Beep

The QL's *Beep* command can accept a variable number of parameters to produce a one-channel complex sound.

As well as being so versatile, this means that, initially at least, complex sounds are just that. Indeed, the QL manual states unhelpfully that the "command is best used experimentally rather than syntactically."

Reading that made me think that some kind of sound development program was called for. The program I have written enables you to have an on-screen display of the current parameter values and to play or cancel any sound using the values displayed. Any value can be changed providing that it does not cause an overflow error.

Briefly, these are the eight values used with the SuperBasic *Beep* command, in order:

Duration controls the time for which the sound is played, from a value of 0 (playing the note continuously until cancelled to the shortest note with a value 1).

Pitch 1 sets the pitch. A low value is a high pitch (short period). The use of just the two parameters *Duration* and *Pitch-1* gives the simplest type of one-note beep, as on the ZX Spectrum.

Pitch-2 is the other limit of a note of varying pitch. This may have a higher or lower value than *Pitch-1*. If suitably set up, the sound can alternate between *Pitch-1* and *Pitch-2*.

Grad-X is the rate at which the sound changes by steps of *Grad-Y*. Contrary to what is said in the manual, this accepts values in the range 0 to 32767.

Grad-Y is the step value used while alternating between *Pitch-1* and *Pitch-2*. This gives the change of pitch between every sound played. It takes either a negative or positive value corresponding to ascending or descending notes.

Wrap determines whether the sound goes up and down in pitch or just in one direction, and how many times. A value of 15 means 'wrap forever'.

Fuzzy changes the pitch randomly every cycle. A high value (eg, 15) tends to make most sounds end up like white noise.

Random changes the gradient randomly. The effect depends on other parameters, but is often quite noticeable!

To simulate notes without the full range of eight parameters, any redundant values should be assigned a zero value. When you run the program, it displays the eight *Beep* parameters, their current values and the limits which the values can take. At the bottom of the screen is a display of all the controls available.

At any time the parameter you are working on is displayed in reversed video (ie, red numbers on a white strip). You can move up and down the list with the up and down cursor keys at the bottom of the keyboard. The white strip moves to show which parameter you're currently

working on.

The function key *f1* at the left of the keyboard is used to increase the value of the parameter. Pressing *f1* alone increases the value by 1. Pressing *Ctrl f1* increases the value by 10. Pressing *Shift f1* increases the value by 100. Pressing *Ctrl shift f1* increases the value by 1000. Decreasing values is done with the *f2* function key in the same steps as for *f1*. This is all displayed at the bottom of the screen as a constant reminder of the controls available.

To hear the sound, press either the *f3* function key or the *P* (play) key. QL sound is quite loud, so you need a way of aborting any long sound. Pressing *f4* or the *C* key will cancel the current sound. If you want to quit the program simply press the *Q* key. This does not cancel any sound already set so be sure to do this first, or you may have to enter *Beep* alone as a direct command to make your QL shut up!

The issue of QL that I have been using has an annoying arithmetic habit of making -1 -1 and -2 -2 both equal to 0, but any other numbers are evaluated correctly (eg, -3 -3 gives -6). If this happens on your QL as well, you may be unable to step down negative values from -1 to -2 with the program, so you should step down by, for example, -10 then step back up again in steps of 1.

The program uses many of the QL's facilities, with not a *Goto* in sight. Long variable names are used throughout, which means that there is a lot of typing to be done, but don't let this discourage you. I find this program very easy to use and very useful for developing sounds for SuperBasic games.

Screen savers

Bob Pritchard shows you how to save and load selected sections of the Spectrum screen display

The two facilities provided in the Spectrum for saving television pictures are extremely useful and without doubt invaluable but they can at times be uneconomical. Using the Save "picture" Screens method, for example, naturally assumes that the whole screen is required to be saved and thus will output to tape 6912 bytes. This comprises 6144 display bytes and 768 attribute bytes. The other method, Save "name" Code 16384, 6912 does the same thing but allows the user to verify what has been saved. Nonetheless, the same amount of bytes goes to tape, that is, 6K of display and ¾K of attributes.

Now this is quite a bit of tape length and once the process has started, unless Break is used, waiting time enters into it. But if you are a keen graphics programmer and have used only a part of the screen that needs to be saved, or the middle section is all that is required, then a lot of saving is being done of bytes not needed, some of them zero. Also, attribute bytes are included when they may not be wanted or they may want to be changed.

Loading back has its drawbacks too. Whatever has been Saved will be Loaded back to the screen exactly as it was Saved,

and this again takes time. A perfectly good graphic display occupying two thirds of the screen may require text or a description being added later in the lower third, or indeed instructions for a game.

The following tables give the relevant details of each section of the screen as divided in the Spectrum system.

DISPLAY

Section	Lines	Start	Finish	Bytes
Top	0 to 7	16384	18431	2048
Mid	8 to 15	18432	20479	2048
Top + Mid	0 to 15	16384	20479	4096

ATTRIBUTES

Section	Lines	Start	Finish	Bytes
Top	0 to 7	22528	22783	256
Mid	8 to 15	22784	23039	256
Top + Mid	0 to 15	22528	23039	512

It is now possible to construct a Basic program, using these figures, which will Save the top, the middle, or the top and middle sections as required, and the whole

thing can be made a Gosub routine in any graphics program you may have written.

The Basic program given here uses an input 1. for top, 2. for middle and 3. for top and middle combined. It provides for Saving just the display bytes as desired, relative to the screen sections, and whatever has been Saved in this manner can also be verified.

When Loading back from tape, it is possible to transpose sections of screen such that what was Saved from the middle can be loaded back to the top and vice versa by entering the change of Code. For example, if on tape there is "picture" Code 16384, 2048 it can be loaded back as "picture" 18432, 2048 and what started life as a top screen picture will then appear as a middle screen picture.

When Loading back displays from tape in this way, enter first some command such as Print at 15.0, thus setting a new print position so that "report" messages do not encroach on the picture just loaded in, marring it. The report 'Bytes:' should now appear below the middle section of the display.

One last point: since the tape is already running after saving the attributes, it only remains to press a key when the second prompt appears to Save the display bytes, if that is what is required. But remember that the display and the attributes will have the same name Saved on tape, only the codes will be different.

ATTENTION! ATTENTION! ALL COMMODORE USERS!

Do you use tapes? Are you sick and tired of waiting for your programs to be Loaded/Saved from/on the tape? Then you need a **TORNADO!!** Tornado allows you to Save/Load/Verify your Basic/machine code programs faster than a CBM 1541 disk drive does!! Due to popular demand! Tornado now comes with new and more powerful commands plus extra instructions to assist you in making fast versions of your existing machine code/Basic programs. Tornado is available on tape for CBM 64 and 8K+ Vic 20.

Do your Run/Stop and Restore keys often fail? Do you want to come out of those crashes? Or get into those unbreakable programs? Then what are you waiting for, get yourself a

BREAKER!! Reset switch and  your computer know who is the boss!! Breaker can be connected  your machine in seconds, no soldering. Included with the Breaker reset switch is extra backup software on tape. Breaker is now available for any CBM 64 or Vic 20.

Available for CBM 64 and the Vic 20 now is the

ROM-FILE which contains a complete disassembly of CBM 64/Vic 20 Rom with comments! As well as a complete description of all 8502/6510 instructions and addressing modes + a complete listing of a machine code monitor and more!

Please make cheques/PO payable to:

BSF COMPUTER SERVICES LTD.
DEALERS AND GENERAL ENQUIRIES

Jump to it!

Peter Whittaker shows you how to make use of the Dragon Rom's RTS instruction in your own programs

Location 359 contains an RTS instruction (return from subroutine) which is called whenever the Rom's character input routine is used. By replacing this RTS instruction with a JMP command (jump to specified address), we can redirect the computer to our own routines. I have writ-

ten three utility programs using this approach. If assembler 1 is entered, anything sent to the screen will also be copied to the Printer. Assembler 2 will also duplicate data sent to the Printer, copying it to the screen. These routines are disabled by Poke359, 57 and enabled by

Poke359, 126. This is a rather clumsy way of switching a routine in and out. It is much neater if one can just press a key to switch a routine on or off. In all the programs below, the Shift and Right Arrow keys are used to do this. To avoid confusion, all the programs report after the key press saying whether they are on or off.

Assembler 3 (or Basic #1) is the improved screen to printer copy routine.

Next week we shall use the same system to create an List formatting routine and a List speed control.

AUTOMANIA

WALLY WEEK

is here!

FOR COMMODORE 64 AND 48K SPECTRUM

WHO WILL JOIN THE
EVIL DEAD
NEXT?

AVAILABLE FROM
ALL GOOD COMPUTER
GAMES STOCKISTS INCLUDING
THE VIDEO PALACE
100 OXFORD STREET, LONDON W1

DISTRIBUTED BY
PALACE VIRGIN GOLD
88 FLEMINGTON ROAD,
LONDON E20 7NL
TELEPHONE: 01-530 5596

TURBO CHARGE YOUR SPECTRUM

Outperforms any Spectrum interface

The unique Turbo interface from Ram gives you all these features – and more – in one unit:

- * A variety of interfaces including: Rom cartridges, two 9-way D plugs for standard joysticks, PLUS full expansion bus at rear.
- * Compatible with Kempston and Protek protocols.
- * Works with latest Quickshot Mk II auto rapid-fire joysticks!
- * Choice of Rom cartridge or tape cassette software.
- * Instant program loading with cartridge software.
- * Built-in power safety device – unique to Ram Turbo.
- * Full one year guarantee.
- * Immediate availability – 24 Hr despatch on receipt of P.O./credit card details (cheques – seven days).
- * Incredible value – only £22.95.

So don't wait around – simply complete the coupon and send it to us today.

Or call our credit card hot line on 02514 25252. (Access and Visa welcome).

Ram Electronics (Fleet) Ltd, 106 Fleet Road, Fleet, Hampshire GU13 8PA.

Please send me:

_____ Spectrum Turbo Interface(s) at £22.95
+ £1 p + p (overseas orders £3 p + p)

_____ Quickshot II Joystick(s) at £9.95
(Only when purchased with Turbo – normally £12.95 + £1 p + p)

I enclose cheque/postal order or charge my Access/Visa for: £ _____

FULL THROTTLE

3D Motor Bike
 Grand Prix
 on the
 48K Spectrum — £6.95

Compatible with Kempston, Protek/AGF,
 and Interface 2 joystick types.

Available through good
 computer stores
 everywhere.

Sorted and filed

Neil Barnes continues his multi-purpose facility program for BBC with 1.2 operating system

This is the second part of last week's program — a file program designed to make use of Mode 7 BBC graphics.

PROCtitle (TS, H) Prints title in double height
TS — text to be printed
H — X position of text
PROCdecide
Decides which option has been chosen
PROCnewfile
Allows a new file to be

PROCgetdata
PROCadd

PROCverify

PROCdump
PROCsort
PROCsearch

PROClst

PROCend

created
Inputs data from user
Allows extra items to be added
Allows the file to be verified
Dumps file to printer
Sorts the file
Searches for an item in file
Allows the user to view the file
Ends the program

Procedures
PROCmenu
Function
Displays menu on screen

AT LAST!

A RANGE OF QUALITY ARCADE GAMES FOR THE SHARP MZ700

HUNCHY. A first for the Sharp! £5.95

Rescue Esmerelda from the castle via 8 screens of action-packed fun.

TWIN PACKS — Two fast m/c games for the price of one.

PACK I: U.F.O. NOUGHTS & CROSSES £6.50

U.F.O. — Prevent the invasion of earth by alien beings; the game features a high-score table and becomes faster as your score increases.

NOUGHTS & CROSSES — Standard game for two people but very fast.

PACK II: STARGATE/AIR ATTACK £6.50

STARGATE — Defend the Stargate and prevent the enemy entering your galaxy.

AIR ATTACK — With a World War I biplane, blast your way through five levels to the 21st century.

PACK III: MAZEMAN/SAUCER SIMON £6.50

MAZEMAN — Faster than Pacman and with many nasty modifications. Beat the ghost to the fruit and open the second maze.

SAUCER SIMON — Communicate with an alien craft by copying a series of colour tones. Up to 40 sequential tones and seven levels of difficulty.

COURSEWINNER

The Punters Computer Program

COURSEWINNER allows you to use the power of your computer to get the edge on the bookies now.

● COURSEWINNER contains a database full of detailed information on all English and Scottish flat courses. The ten leading jockeys and trainers, and effects of the draw is detailed for each course.

This information can be displayed on the screen at any time. ● The program analyses these factors combined with the results of the last three outings, starting price and weight carried.

- COURSEWINNER is simple and quick to use, very powerful
- Supplied with detailed instruction booklet

Price £12.50 all inclusive IMMEDIATE DISPATCH RETURN OF POST

Available for: SPECTRUM 48K, BBC, COMMODORE 64, DRAGON, APPLE II/III, ATARI 48K

POOLSWINNER

The Ultimate Pools Prediction Program

● POOLSWINNER is the most sophisticated pool prediction aid ever produced. It comes complete with its own massive database.

- Can be used for Snookers, Drawn, Aways and Hopes.
- The database contains over 20000 matches (10 years league football). It updates automatically as results come in.
- The precise prediction formula can be set by the user. This allows development of your own unique method.
- Package is complete with program, database and detailed instruction booklet.

Price £15.00 all inclusive IMMEDIATE DISPATCH RETURN OF POST

Available for: SPECTRUM 48K, ZX81/16K, BBC/B, COMMODORE 64, DRAGON, APPLE II/III, ATARI 48K

Available from dealers or direct return of post from:

37 Councilor Lane, Cheshire, Cheshire. Phone: 061-428 7425

'POWER LOAD' CASSETTES FROM DATACLONE

Added security against pirates

Power Load is a software controlled system that makes copying extremely difficult, either by audio or bit copying, or by code breaking. Moreover, conversion routines are altered regularly. permanent deciphering system can be successful.

Very fast loading

Loading time on the Commodore C64 is over three times faster than a normal cassette. Sinclair Spectrum is over twice as fast.

Ultra reliable

Uniquely, Power Load has been designed specifically for high volume production techniques. Power Load cassettes are at least as reliable as standard cassettes, unlike other systems.

Reduces costs

Using Power Load, a Commodore C64 cassette can be reduced from C50 length to C10 — a substantial cost saving. Available for C64: Spectrum (BBC and Electron under development)

DATACLONE, Unit 1,

Full of character

Simon Wallace takes a closer look at the word processor

In the last issue, we looked at this word processor in fairly general terms. This week, we shall look more closely at its implementation.

The program has been coded in Basic, as described last week. However, one machine code routine has been included to give a fast, accurate guide to the location of the cursor. As this was found to be necessary, the routine has also been used to turn the border red if the cursor is near the end of a logical line or at that bottom of the screen. There is no other protection against losing data off the screen. (This is another area in which you may wish to improve the program.) The program as written leaves enough space to store over 20,000 characters of text. Any longer document would need to be split.

Most input values are set up with defaults. For example, pressing the Return key in response to line number and lines to display the editor will select the end of file, displaying no data. This is the normal way to add to the text. Options for either all or part of the file will default to the whole file. All input values are validated where possible, and, in some cases, sensible but arbitrary values are used.

Definitions for the variables used in the program can be found in the Data Dictionary. There is also a table of the special characters used in Commodore Basic for screen and colour control. When typing the program, use the upper/lower case mode of the keyboard by first pressing Shift and the C- Commodore key. When the program runs it locks the keyboard in this mode.

Using the word processor

Most possible actions are explained on the screen. During an edit the whole screen is used for your data, so editor instructions must be understood in advance. If anything goes wrong see item 15 below.

- 1 Load the program and enter Run.
- 2 If you are changing previously entered text, select option L to load. Enter the filename. To select the whole file, press Return when asked for the start record number. When the file is found on the tape, the screen will turn green.
- 3 Select E for edit. Enter the line number to start at and the number of lines to show on the screen. Normally you should edit about ten lines at a time. If you only wish to add text to the end of the file, press Return both times instead of entering the numbers.
- 4 During the edit, depressing the FE key will enter the reformat routine. Enter the required width of the text. An additional indentation may be given if desired.

- 5 The F5 key will create an additional line at the current cursor position.
- 6 Depressing Shift and F5 (F6) will delete the line at the current cursor position.
- 7 The Return key will end the current logical line at the cursor.
- 8 The F7 key will set the cursor to the start of the next logical line without affecting the current line.
- 9 A blank line should be created by typing the special character \leftarrow on its own on a line. A new page can be started by using \uparrow on its own.
- 10 The background will turn red if the cursor is near the end of a logical line, or the bottom of the screen. Do not allow data to be lost by typing too much.
- 11 End the edit by depressing the F1 key. Press U to update the data with your changes. Pressing A causes the changes to be aborted.
- 12 After an edit you should either enter the numbers for the next edit, or e to exit from the editor.
- 13 To save the data, select option S. Enter the filename and press Return to select the whole data. It is wise not to overwrite the previous version, so keep two different tapes. After the save, rewind the tape and select the verify option if desired.
- 14 To print the data, select option P. Enter start and end line numbers (or press Return for the whole file). Enter the length of printed text per page. Enter the number of lines between pages or -1 to manually adjust the paper. Enter the device number as shown. Use 3 to preview the text on the screen. 4 or 5 are the standard printer channels. En-

ter the width of margin required. Enter Y or N to select line numbering. When the computer pauses for pages or at the end of the print, depress a key to continue.

- 15 If you break Basic in some way, enter Goto 999. This will prevent your data being lost.
- 16 At the end of your work, select option F to return to Basic. Make sure you have saved or printed first as the data is lost.

Word processor — data dictionary

a	menu option selected
bl\$	blank line (40 spaces)
cd\$	cursor down\$
dev	device number to Print on
el	edit line — start line no
en	edit number — no of lines to display
eof	end of file
li\$	filename for Load or Save
lc	line count (whilst printing)
lr	lines returned on screen
mg\$	margin
out\$	general purpose output line
pe	print end line no
pg	page gap = blank lines between pages
pl	page length
ps	print start line no
qu\$	quote character
q2\$	quote + comma
ri	required line — cursor position
sc\$	array of text read from screen
st	status of tape transfer — see manual
tx\$	array holding main text
x\$	character input from keyboard
xa	ascii value of typed character
x	line no of cursor
y	character position of cursor
ym	yaw no — change in file length due to edit

(Other variables have temporary use only)

Special characters

The following special characters are used in Print statements

\leftarrow	CRSR down
\rightarrow	CRSR right
\uparrow	clear screen
\downarrow	cursor HOME
BLK	colour BLK
YEL	colour YEL
WHT	colour WHT

**SPECTRUM OWNERS
A T.V. MONITOR FOR THE PRICE OF A GAME?
WITH THE NEW MICRODELERIUM
MONITOR INTERFACE
YES!!!**

Simply connect monitor interface to video in socket of your video recorder, connect video recorder to T.V.

**YOU NOW HAVE A COMPOSITE
VIDEO MONITOR**

Flicker free display.
No Ghosting or Drift.

Will also enable you to record programs, games etc. to videotape for later analysis or demonstration. Study your game playing technique.

PRICE ONLY £14.95 inc. VAT, postage etc.

Microdrive compatible. Has its own expansion slot. Supports all peripherals. Runs all software. Requires BNC socket as video in socket on recorder. See Below.

CHEQUES, POSTAL ORDERS PAYABLE TO

Write your own machine code adventures

Without any knowledge of machine code whatsoever

**AVAILABLE
NOW**

THE QUILL
FOR THE
COMMODORE 64

**AVAILABLE
NOW**

THE QUILL is a major new utility written in machine code which allows even the novice programmer to produce high-speed machine code adventures of superior quality to many available at the moment without any knowledge of machine code whatsoever.

Using a menu selection system you may create well over 200 locations, describe them and connect routes between them. You may then fill them with objects and problems of your choice. Having tested your adventure you may alter and experiment with any section with the greatest of ease. A part formed adventure may be saved to tape for later completion.

When you have done so THE QUILL will allow you to produce a copy of your adventure which will run independently of the main QUILL editor, so that you may give copies away to your friends.

THE QUILL is provided with a detailed tutorial manual which covers every aspect of its use in writing adventures.

A giant umbrella

Last week I mentioned wrist radios. No it wasn't a joke. It has become a real and exciting possibility. The aeronautical and space company Lockheed have announced and demonstrated a giant antenna of aerial that is to be used in space.

Originally developed for NASA, the antenna will measure over 50 metres across. Its design is like that of an enormous flower consisting of petals made from graphite epoxy and a fine mesh of gold-plated wire. The antenna can be rolled up and loaded aboard the space shuttle for transporta-

tion into space. Once the shuttle is in orbit, the antenna will be off loaded and unfurled rather like a giant umbrella.

The sheer size of the antenna will make it extremely sensitive to tiny signals from Earth. A small wrist radio will be quite sufficient for the space antenna to pick up the signal, say Lockheed. Once the signal has been received, it can be retransmitted by the logic onboard the antenna satellite to anywhere within the hemisphere that can be "seen" by the antenna. This will provide communication throughout a complete continent such as Europe or North America.

The antenna will be in an orbit that is about 24,000 miles above the surface, placed in such a way that the dish is geostationary. That means that it will be in an orbit calculated to be the same as the Earth's own orbit and, therefore, to all intents and purposes, always in the same area.

Geostationary orbits are old hat now that the television satellites use them, but this antenna will mean that not only simple communication will be possible, but also some very interesting geophysical research. An example of this will be the relaying of radio-telescope signals from outside the atmosphere of Earth which is always a limiting factor.

There are vast areas of the Earth that are inhospitable and completely without any telecommunications. Areas such as Northern Canada and Alaska will be opened up and expeditions and research teams will no longer be cut off from the outside world. This will enable the exploration of these areas to be conducted more safely and the search for natural resources made a less hazardous undertaking.

With the use of computerized packet switching techniques, many consumers could be handled each with their own wrist radiophone. The possibilities are really enor-

mous and it will mean that emergency services and help could be summoned instantly. The very idea of wrist radios is very "Tomorrows World" in concept, but the Lockheed project brings that idea much closer.

The success of the project will obviously decide the future of the idea which is really only new in scale, but this may well be the forerunner of larger antennas that will revolutionise communications as we know them. To get some idea of the scale of this, think of the dome of St Paul's Cathedral in orbit. More on revolutionary communications next week when we shall look at cellular radio.

Ray Betty CW6JNJ

This series of articles is designed for radio and microcomputer enthusiasts alike. If you have any queries that you want answered, hints and tips to share, or topics that you would like to see covered, write to: Ray Barry, Micro-radio, Popular Computing Weekly, 12-13 Little Newport Street, London WC2R 3LD.

Meteors

on BBC

This is a very simple game in which you have to steer your spaceship through a

meteor field. The longer you survive, the higher your score is. The skill level reflects the speed of the game, 1 is fast, 10 is manageable.

The game works basically by testing to see if Z or X has been pressed and then moving the ship appropriately. The meteors

are printed randomly at the bottom of the screen and they scroll up. Line 160 checks to see if the ship has crashed.

I have tried to make this game as compact as possible so there is plenty of scope to improve it, eg. colour, multi-colour characters. The keys are: Z left, X right,

Meteors
by Phillip Venables

Arcade Avenue

Stop the express

Im pleased to see that Sinclair's new arcade games have finally seen the light of day (no that's not another dig at their delivery dates). The quality of the games is very high and they are reasonably original.

Of the four games I have seen, I got on least well with *Zipper Flipper* which is like a cross between a pinball machine, a fruit machine and breakout. It was a bit slow and the copy I saw had no instructions.

Driller Tunks has some nice graphic animation and is vaguely reminiscent of *Dig Dug* where you burrow around beneath the surface of the earth avoiding or shooting monsters. Although a familiar format, the game is streets ahead of any version of *Dig Dug* for this micro.

Eric and the Floaters was one of the best games — broadly you run around in a maze being chased by large and unnecessarily aggressive balloons (a touch of *The Prisoner* here perhaps?). The graphics, movement and game design are extremely good. Your defence against the balloons is to leave time bombs in their path and hope they are close enough by the time it goes off.

Certainly the most impressive game is *Stop the Express*. It's a wonderful concept based on all those old films where the bad guys chase the good guy along the top of a speeding train. It's also superbly executed with many nice touches like electricity pylons that whizz past giving a real illusion of movement. Playing the game is a bit like playing an exciting version of *Hunchback*.

Above all, this game is hard, hard, hard, and very addictive. If you do get caught you are thrown off the train in an apparently agonising and certainly lethal tumble of limbs. Not for the faint-hearted.

Whilst on the subject of *Hunchback* you should check out *Punchy* from Mr Micro. Although just a jazzed up version of the original game, it is based on Punch and Judy where you play Bobby trying to rescue Judy from the booth by leaping various obstacles, dodging flying sausages, etc. The quality of the graphics makes the original game look

It's a shame so many Spectrum owners must already have the Ocean copy of *Hunchback* because, although less faithful to the original theme, this program has a tremendous sense of fun.

However, the game has also

been released for a range of computers ranging from the geriatric Vic20 to the as yet unreleased Armstrad where it should do very well. It is a sign of the quality of the game that Commodore themselves are distributing the version for the CBM64.

Finally, may I congratulate Mr Micro for the quality of their packaging — a large well designed box that displays no less than four screen shots of the action. If we are to see the age of flashy packaging, then I hope it will all become as informative as this.

Tony Kettle

The Arcade Corner is a new section for anyone who enjoys playing arcade games. If you have any comments, from playing tips on difficult games or programs you'd particularly like to praise (or blame!) then write to: Tony Kandle, Arcade Avenue, *Popular Computing Weekly*, 12-13 Little Newport Street, London WC2R 3LD.

New from

MIRROSOFT

Watch out for Mr BOUNCER!

leaping your way—a test of speed and tactics with four screens each with eight stages. Keep Mr. Bouncer working hard and score points... If you can't! Mr BOUNCER tests reflexes and game tactics to the limit. It's so tough that a separate 7-level practice program for kid brother (or dad!) is included.

On cassette for the BBC B (versions for the CBM 64 and Spectrum coming soon). £6.95

Discover the excitement of creative computing with

GO SPRITE

a versatile, easy-to-use sprite editor for the Commodore 64 which also demonstrates animation sequences on-screen.

With a choice of joystick, lightpen or user-definable keyboard control Go-Sprite has an icon-driven command system for ease and speed of use.

Go-Sprite can handle up to 32 HiRes or Multicolour sprites and produce overlays up to seven layers.

Sprite data files can be made on disk or tape and two accompanying programs enable you to produce data and arrays for use in your own programs.

For the Commodore 64, on cassette £9.95; or disk £11.95

All prices are inclusive of VAT. Mirrosoft programs are available from larger branches of Boots, John Menzies and W.H. Smith and from other leading software stockists.

Go hunting with CAESAR THE CAT

Help Caesar clear the larder of mice. Hunting along crowded shelves you guide Caesar as he chases persistent mice which are devouring plates of food. Widely praised when launched on the CBM 64, acclaimed on the Spectrum, Caesar is now here for BBC B owners

On cassette for BBC B and Spectrum £6.95 and CBM 64 £8.95

Cuddle your own CAESAR

We have had so many requests for a soft-toy version of Caesar, the lovable black and white cat featured in our much praised program Caesar the Cat, that we have had some made. He is cute and cuddly with a body length of approx. 8 1/2 inches. He is yours (mail order only) for £8.50 (inc. p&p), while stocks last!

Tony Bridge's Adventure Corner

Hobbit scores

Since we last looked at *The Hobbit* Hall of Fame, many people have written to me with their scores and, incidentally, some of the bugs that they have across. Melbourne House have recently published a book, by David Elkan, which looks at some of the ways in which *The Hobbit* can be solved — maybe there is a case for a volume of *Hobbitbugs*!

First in the HHOF this time round is Jason Hattrell: he solved it on his CBM64 in less than two days, and a score of 100%. "I had read that this is a difficult adventure and was amazed at how easy it was, although I thoroughly enjoyed it, and was astounded at the graphics, and the way it understood all the various sentences you can type in. I am fourteen years old, and this was my first adventure." I hope you have many years of adventure solving, Jason!

James Arnold of Camberley, also on a CBM64, with a score of 95%.

David Andrew and Trevor Smith of Sunderland, again on a CBM64, and a score of 92.5%. "We enjoyed *The Hobbit* and still find pleasure in it as it varies each time you play it. We think it is the best adventure game we have come across so far. We are now busy with *Interceptor's Heroes of Karn*, but are stuck. We cannot get past the pirate or the serpent, and how do you get Beren? We read your page first every week and would like your opinion on *Valhalla* as we are thinking of buying it."

Valhalla is not so much an adventure, as

a computer movie. The player can sit back and watch the action unfolding on the screen, or can intervene to alter the course of events. The game is a little slow, but features fairly sophisticated command input. You won't find the traditional adventure format followed in *Valhalla* — and there are not a lot of complex puzzles to be solved. The plot takes the form of a number of quests that have to be completed before *Valhalla* is attained. The scope of the game along with the book included in the packaging, make this adventure well worth the seemingly expensive asking price. The Commodore version of *Valhalla* is a faster and more colourful than the original Spectrum game. Legend have taken out a £2 million insurance policy, would you believe, against it being pirated before the official release! As for *Heroes of Karn*, I hope to be looking at this one in more detail in a forthcoming Corner, as several people appear to be stuck in it. If you have completed this one, or got some way with it, how about dropping The Grand Elf a line about it?

Gregor Houghton with a score of 75% on, I presume, his Spectrum. Your score, Gregor, is what you see before you place the treasure in the chest — to increase it, you must solve a few more puzzles along the way. Gregor has noticed the well-known *Hobbitbug* (try entering EN DO, which elicits the answer about everything evaporating and The Crack being dead), but has also found the answer: "You swing a broadside, but the ailing moves out of the way of your sword!"

Brian Ure, with 67.5% — Brian is another *Hobbit* who is wondering where the extra percentage is going to come from. Well, Brian, as you know, *The Hobbit* can be solved in more than one way, and you are going to have to explore Middle Earth thoroughly to pick up those extra points. Some people have gone out Troll-bashing after depositing the treasure, while others take the more conventional route of picking up everything they can, and visiting every location. As a rough guide, you can expect to finish the adventure with a score of around 50–60% if you go straight through, and you can pick up around 2.5% for other locations visited, and objects picked up.

J J Smith of Port Glasgow. Ron Pearson

of Kettering, with a score of 95% (the first time round) on his CBM64. Ron Smith of Northants, who very kindly sent me solutions to *The Hobbit* and several other adventures for the Spectrum. K Finney of Wigan, with a score of 50%. Michael Whitehurst of Staffs with a score of 100% (or as it appears in the CBM version, 10.0%). Chris Stamp and his brother, with 95% on CBM (it seems to be taking over from the Spectrum as the favourite *Hobbit* machine). "Another adventure to be recommended for the CBM64 is *Aztec Tomb*, from Alligata. This is a very entertaining game, and I enjoy it very much, although I haven't completed it, and the spelling is awful (even "Tomb" is spelt "Tumb")! Apart from that a number of people are asking about, and I will be mentioning it in more detail at a later date. Incidentally, Chris has three games of his own on the market, one of which, *Zorgon's Kingdom* for the Vic20, marketed by Romik, is described as "a real-time graphic adventure", although Chris prefers to think of it as an arcade game!

David Fearn of Huntley, in Gloucestershire, who scored 92.5% on his CBM64 (within two hours of purchase!), and 62.5% on his Spectrum (4 months from purchase, we'll put that down to the old "dead-flesh" keyboard of the Spectrum). Look in PCW Vol 2 No 11, for Paul Shreeve's name who, unfortunately, beat you to "the double", David.

Ian Ritchie, with 82.5% on his Oric, for a change. He has found a little bug — the Barren Land is called, on a second visit "Dragoncccdreadfuldesolation"! Your findings, going from Beorn's House, Ian, are quite normal and par for the course.

Spencer Richards of Theydon Bois in Essex, a score of 72% came at just one last attempt: "After months of frustration, I'm greatly relieved! PS. I entered your name in *Crystal's Invasion of the Body Snatchers* and was greeted with a hail of trumpets and singing angels! Thank crystal for a fantastic game!"

Steve Hammett with 55%, also on his Oric-1. "I cannot pass Gollum — when he asks me the riddle about "dark" from the book, I answer "dark" and he strangles me. How can I get past?" You should not answer the riddles if you don't know the answer, as you will certainly be killed, should he follow you, with the short sword.

Next week more HHOF.

Adventure Helpline

Going bananas? If you are stuck in an Adventure with nowhere to turn do not despair — help is at hand.

Fill in the coupon, explaining your problem, send it to us, and a fellow adventurer may

be able to help.

Remember — the system only works if those adventurers who have solved the puzzles get in touch. Every week is Save An Adventurer Today (SAAT) week!

Foolish words

Some time ago D. Capstick wrote to PCW enquiring whether there was an implementation of the Cezil language on the ZX SPECTRUM.

At that same time we said that we didn't know of one. Foolish words as it turned out. Not only have we been informed (politely) of Spectrum versions but... well see for yourselves.

Machine: Spectrum. **Supplier:** Proctor, 27 Richardson Close, Leeds. **Price:** £3. **Machine:** Spectrum. **Supplier:** D. Ross, Encom Computers, 54 Fore Street, Bradninch, Exeter. **Price:** £7. **Machine:** BBC. **Supplier:** A Boswell, 16 Birchfield Rd, Sunderland. **Price:** £4.

Machine: BBC. **Supplier:** M Strong, 6 Rhulben Rd, Abergavenny, Gwent. **Price:** £2.

Micro music

S Buckfield, of Coulsdon, Surrey writes:

Q I have become very interested in electronic and computer music, and I would be grateful for any information you could give me on synthesizers, particularly those in the price range up to £500.

A This is not really my field. I would have thought that your question would have been better directed at a music magazine (*Which Keyboard?*). But I do have another suggestion to make. The BBC micro is compatible with a large number of synthesizers which it can be used to control. Also, Casio offers a

Centronics printer interface connection for its MT-200 music keyboard. Any micro with a Centronics interface can be connected. The MT-200 costs £129. The interface is £29.50.

A legal claim

J M Bright of Potters Bar, Herts writes:

Q Having bought my son a Commodore 64 for Christmas — it being highly recommended — we were very upset to find that he has had to return it twice to the place where we bought it because it has been faulty. Eventually, they kindly refunded the money and have been very fair about it.

Surely we should be able to lodge our complaint directly with the manufacturers. I would welcome your advice on this matter, and if possible an address to write to.

A One of the saddest things about buying presents — whether it be a computer or anything else — is when they go wrong or don't work. The feeling of disappointment and annoyance is bound to persist despite any good treatment you receive from the retailer who sold you the machine.

Under the law you do not really have any legal claim against Commodore, whose machines in any case are no more unreliable than any of the other popular home micro manufacturers.

I will nevertheless give you an address to write to: Commodore Business Machines (UK Ltd), 6785 Ajax Avenue, Trading Estate, Slough, Berks SL1 4BG.

Monitored colour

Percy Ellis of Wotton-under-Edge, Glos, writes.

Q I have the chance of a colour monitor for use on a Spectrum 48K. Can I use it? If not, what modifications, adaptations are necessary to make the correct connections?

A If the monitor is a 122A Microvitec 1431 then you can use it with no modifications

at all. If not, then you've got quite a lot of work to do.

Page 160 of the Spectrum manual shows the edge connector in diagrammatic form. You will have to solder (using an extension edge connector) two wires, one to the video line and one to 0 volts. These will then form the input/output lead to your monitor. Without invalidating your warranty there is nothing else you can do.

In all honesty, I would advise you to seek professional advice (ie, electrical) before you try making your own leads, etc.

One last thought, there is a new book on the market *The Complete Sinclair Database* by Adams, Beardsmore, and Gilbert which actually covers this topic.

Problem cassette

Ian Rossitor of Southampton writes:

Q I own a CBM64, and have been trying to load *Imagine's Cosmic Cruiser* and *Pedro* without success. I know the tapes are OK because they load and run perfectly on a friend's computer. I have had the heads cleaned, and the leads verified by my helpful dealer without any luck.

The games crash when the *Imagine* emblem is supposed to appear. Please tell me what it could be, or should I stop buying *Imagine* tapes?

A I have had a number of letters regarding tape loading problems on the CBM64. In each case the tapes concerned load perfectly well on another machine. The problem has to lie with the cassette recorder.

Cassette loading problems occur on all machines and the causes tend to be either:

- a) dirty heads — use a cassette head cleaner
- b) magnetised heads — use a cassette head demagnetiser
- c) heads out of alignment —

Is there anything about your computer you don't understand, and which everyone else seems to take for granted? Whatever your problem **Peek it to Phil Rogers** and every week he will **Poke** back as many answers as he can. The address is **Peek & Poke, PCW, 12-13 Little Newport Street, London WC2R 3LD.**

adjust the AZMUTH screw

Unfortunately, there is no simple solution to every problem. It is just a matter of 'hit and hope'. I don't think that in your case there is any reason to boycott *Imagine* tapes as they work quite satisfactorily on your friend CBM64.

What's the difference?

Malcolm Singh of Dartford, Kent writes:

Q I would like to know the difference between the BBC 'B' and a BBC 'A'. Is there a change in the graphics screen? What is the difference between the operating systems in these machines?

A Without writing a book I would say that the Model A is a Model B with a lot of facilities missing.

The Model B is far superior to the A in very many respects — both in the hardware and in the operating system software. A considerable proportion of the commercial software written for the BBC will only run on the B so it is just as well if it is possible to upgrade from an A to a B!

I'm sorry for the brevity of my answer but as I said earlier I could write a book.

Hi-res mono

B J Gravestock of Ware, Herts writes.

Q With the software supplied with the QL, does colour play a vital part or could one use a high resolution monochrome monitor?

A Whilst colour will undoubtedly enhance the screen displays of the QL software, it is extremely unlikely that it will play a vital role. It would seem to me that a black and white monitor would be extremely well suited to the task of displaying the 'business style' information of the Psion QL packages.

DODGE AND COLLECT

Unique is another masochistic new company trying to make ■ in the nightmareishly competitive Spectrum market. You have to admire its guts.

Clerky is a dodge-and-collect game dedicated to the white collar labour force that fills our lives with paper and runs the country.

You control *Clerky*, who seems (if the cover picture is anything to go by) a potential heart-attack victim, and have to rush around collecting pieces of paper whilst avoiding flying rubbers and ink pots.

It's quite astonishingly fast, with the only sensible tactic being to run about as fast as possible and never stand still. Pretty soon you will start ■ sympathise with *Clerky* and feel equally exhausted. Addictive in a frenzied sort of way.

Program *Clerky*

Buckinghamshire

GLIDE PATH

Heathrow Air Traffic Control was a complex program for the Spectrum which simulated the job of an air traffic controller supervising the movement of a variety of aircraft.

The program is now available for the Commodore 64 with a number of extra features including the occasional

Concorde which zooms around making life difficult because of its speed.

Using only a radar screen and something called a stack display which gives you information on each aircraft as it enters the radar area, you have to cope with different speeds, glide paths, altitudes, random hazards, wind speeds and somehow get all the aircraft safely through your area.

This involves issuing appropriate commands to each individual aircraft to guide it safely past all the other aircraft in the area. This is a very complex simulation requiring more time than the average.

If you have the patience to stick with and run the demo routines through several times you'll probably find this one has an appeal that doesn't wear off after a few months.

REASSURING

Todd Rundgren once sang — so long ago one is embarrassed to remember — 'keep your eye on the icon'.

Never was a truer word spoken by a hippy wiz kid. Icons are what's happening, man.

Go Sprite is a sprite designer program for the Commodore 64, not the first and certainly

not the last but different from the rest — it's got icons. Icons are pictures that represent the actions you require performed and having them in your program is a bit like living in a mansion in Hampstead rather

than a workers collective in Bromley-by-Bow.

Constructing, augmenting, and changing colour of your sprites is all done using icons as is animation and saving. There are all sorts of little boxes illustrating the various steps in sprite design — you simply point a cursor on the screen to the relevant box.

Icons really are pretty wonderful things. Apart from anything else, they are so much more reassuring and friendly than vast menus written in horrible jargon. Presumably there is a price to be paid in terms of user available memory, but nevertheless if you don't have a sprite program this one will do fine.

BOUNCY, BOUNCY

Kosmik Kanga is an excellent new game from Micromania — rather in the *JetPac* mould.

The idea is to bounce a kangaroo across several different screens past buildings, de-

serts, beaches collecting a variety of objects but avoiding obstacles like planes and trains.

It's all sprites and good animation — the only technical problem being attributes conflicting producing flicker, something *Ultimate* seem to have either solved or avoided.

Don't let that put you off, though, the graphics are nicely designed, the game has some original touches and the whole thing has been produced with a good deal of wit.

Pick of the week

MOVING COMIC STRIP

Ugh! was one of the first 'new wave' Dragon games to show that the machine was capable of handling good quality graphics after all.

Now Softek have adapted the game for the 48K Spectrum and I think it's even better. The idea of the game is to move a caveman up a twisty track to a cave and collect the eggs that are kept there.

Hampering the caveman are Pterodactyl who does not like her eggs being stolen and an amiable looking dinosaur who is on her side — presumably figuring that creatures with small brains had better stick together.

The graphics are wonderful

not so much because they are smooth scrolling sprites (more or less mandatory these days if you're going to keep up with *Ultimate*) but because of the superb graphic design. All the characters are drawn in black in a mixture of outline and shading that is just like a cartoon. Here lies the success of the game — it really does look like a moving comic strip which you can also play.

Program *Ugh!*

DEVIATION

Maths buffs could find the *Maths Utilities* library useful. This is a collection of various maths programs including a graph plotter, linear regression, various kinds of deviation, numerical integration, etc. etc. There are 12 programs in total, each one provided with a basic explanation of how it functions.

The price below is for the complete set, although it can also be purchased as three separate packs for £3.50 each.

INTO THE DUST

Superbowl is the first computerised version of American Pro Football and, curiously enough, it is for the Dragon 32.

Until recently most Dragon games were unspeakably dreadful, as often as not in Basic with nasty black-on-green graphics. It's ironic that the Dragon seems to have run into trouble just as the software started to get quite reasonable.

Superbowl is a case in point. It has animated sprites to depict football star Floyd and the muscled, enormously large shouldered, ranks of the opposing Washington team. Floyd has to catch the ball and run

with it as far as he can before the Washington team grind him into the dust.

The whole thing is written in machine-code — it looks great and plays well. Incidentally, the Dragon 32 can now be found for prices between £79 and £59 if you hunt around; it has to be great value, particularly with software of this quality around.

INTERMINABLE

War of the Worlds was released with much trumpeting recently — the game is based less on the original book by H.G. Wells and more on the musical concept album released a few years ago by Jeff Wayne.

The original music is featured in snatches and is apparently also used to give you clues throughout. But what sort of thing is *War of the Worlds*? The best answer is that whilst it is not exactly an arcade game or an adventure, neither is it like Ultimate's recent games or Minter Willy's adventures. In fact, with its ropey scrolling and little matchstick men it reminds me of nothing so much as *Uncle Groucho* by Automata except that it adds interminable screens of text which seem unavoidable and removes all of Groucho's humour.

Since one of the major objectives of the game involves Carrie the girl you love it can be assumed that CRL are happy to alienate many women from the game, who generally speaking can't be expected to raise much enthusiasm for such a concept.

Controls are a mixture of the usual up, down, left, right and single key press instructions like Eat, Drink, Get etc; occasionally there are arcade sequences of an embarrassingly simple 'dodge the laser beam' kind — the rest is a matter of

wandering about. Actually wandering is wrong-your man moves as though being pulled along on a trolley, trying to find the six locations featured in the story in the correct order.

I wouldn't ordinarily be so hard on a game but since the thing costs £7.95 — £2 more than most other computer games for the Spectrum — and the few good loader screens and the other impressive graphics have been designed using Melbourne House's *Draw* program I think Computer Rentals had better chalk this one up to experience and think again.

HIGH BLOOD PRESSURE

Thor software's first (to my knowledge) release was *Jack and the Beanstalk*, a game that, in some charts at least, is currently residing at number one — not bad going.

The company has released a number of other programs for the Spectrum, Vic and BBC B. Having missed out on reviewing *Jack and the Beanstalk* (it's great) I thought I'd rectify it by covering one of the newer titles.

Twilight Zone is a real piece of bang bang shoot 'em-up in the Jeff Minter, react or Minter tradition (have you ever considered that the software industry could coin the term 'Minte-

resque' in the same way that plays are sometimes termed 'Pinteresque'?) but done well there's nothing wrong with that.

You have two ground bases one horizontal, one vertical, and must blast away at a variety of strange shaped, erratically moving, aliens. Co-ordinating the two bases is difficult enough but adding to your problems is the fact that you cannot fire repeatedly but must wait until each bullet has run its course.

Nothing dramatic, but a good game for fans of this genre who enjoy having their blood pressure and adrenalin raised. Has the BMA been informed?

BIZARRE STORY

Storyline is an educational program for the BBC B which reminds me vaguely of that party game consequences.

The idea is to construct a story. The computer suggests words and the child accepts or rejects them according to whim, creative decision making or whatever. At the end, a probably highly bizarre story is created.

If you get bored with the existing options you can change the word data and insert your own. In this age of video nasties, I should think that's asking for trouble.

CHOCK FULL

Business Programming on your Spectrum is a fairly austere looking book, chock full of programs for graphs, sales forecasting and filing, with not an alien in sight.

The thesis of the book is that 'Sales and Marketing Managers' can legitimately use a home computer for business. Not a dramatic claim perhaps but one which is pretty much vindicated by the book which is well written and full of useful and impressive programs.

More impressive still is that all the programs have been written for use with, if available, microdrives which tend to make all serious business systems on the Spectrum that much more serious because of the greater access speed.

If you need these sort of programs then you need this book.

CLEAR AND SIMPLE

Whilst there are a number of Forth packages for machines like the Spectrum and BBC there are not too many books which explain the language in a simple way.

The Beginner's Guide to Forth is one of the few and covers basic Forth concepts like the Stack and Floating Point as well as Arrays, Strings defining words etc. Appendices cover things like word sets, Error messages and Forth Vocabulary.

A brief inspection suggests the book is clearly written and would certainly form a good introduction to the subject. My only qualm is that with only 85 text pages including large appendices, the book does not go far enough — you'll probably need to buy another book after this one.

Book	<i>The Beginner's Guide to Forth</i>

This Week is a new section that covers all the new software coming on to the home micro market each week. All suppliers should send details of their new programs to: This Week, Popular Computing Weekly, 12-13 Little Newport Street, London WC2E 8LD.

The lurid screen

Up and down the country, publishers are converting their authors to word processors. Writers everywhere are beginning to have to commit their immortal prose to the lurid screen and floppy disc, instead of the time-honoured type or manuscript.

From the publishers point of view this all makes good sense. It is after all much cheaper to produce a book or a magazine if it can be written, revised, edited and typeset in one continuous process. No more messy re-drafts. No more expensive retyping or resetting.

But what about the implications of all this for our literary heritage?

The latest school of thought among literary boffins is that a book — or poem — is not just the finished products which you or I see when we take a neatly bound volume down from the shelf. Rather it is a continuous process. No author ever gets it right first time. Even the most mundane piece of prose is usually the product of much agonised re-writing.

Individual words, lines, or whole chapters may disappear or become unrecognisable on the way to the finished book. Many a novel has had its ending completely changed. Jane Austen, for example, wrote two totally different final chapters for her book *Persuasion*.

Which is the 'right' ending then? Probably the answer is neither — there may be the one she preferred but we can learn a lot about the way that she worked and

about the characters in the book from the 'alternative' chapter.

This way of thinking has given rise to a sort of 'literary archaeology'. In America, at Austin University in Texas there is a library devoted to collecting everything ever written by famous authors — initial drafts, manuscripts and typewritten copy, typeset versions, page proofs — the lot. Students can then see how the initial idea was re-worked by the author, the publisher, and sub-editor, or even by outsiders, like typists who accidentally forgot to include certain lines when retyping a draft or by friends of the author who gave 'advice'.

The poet TS Eliot, for example often sent his poems to his friend Ezra Pound who frequently substantially re-worked them. The question then arises, just whose poems they actually are. If he'd sent a floppy disc instead of paper copy, we might never know who contributed what.

The advent of the floppy disc may spell the end of literary archaeology. You can't tell from a word processed block of text what alterations have been made to it or who made them — to say nothing of what has been accidentally omitted. The moving cursor deletes or overwrites and having done so moves on and it is impossible to tell what was there before.

Moreover, would Shakespeare actually have written better or worse with a Wang? Or might it not have destroyed some of those creative urges? There is, after all, something inherently less inspiring about a blank VDU than a white sheet of paper.

Anyway, can the machines cope? What about a spelling checker have made of e e cumming's?

Leonard Cohen once said that some people only called his poems, poems because the words didn't reach to the ends of the lines — suppose his machine had justified them?

As I sit here, not putting pen to paper, but cursor to screen, I am forced to wonder — do we really want to enslave ourselves to these jumped-up pocket calculators?

Or will the pen be mightier than the micro in the end?

Gail Counsell

A high price

Puzzle No 114

"This is interesting," remarked Professor Hex at breakfast one morning.

As breakfasts were usually silent affairs in the Hex household, the remark indicated that there was some particularly interesting item in the journal that the Professor was reading. "They've just found yet another high prime," continued the Professor, his voice full of excitement, and his coffee and toast forgotten.

"Haven't they found enough already?" queried his unfortunate offspring who was more interested in stirring her cornflakes.

But the Professor was already on another plane. "Two raised to the power of one hundred and thirty two thousand, and forty nine, minus one," he murmured almost reverently.

"It must be pretty big, then," was daughter's parting remark as she darted out of the door.

Indeed, it is quite a large prime — but, mused the Professor, exactly how big is it? That is, how many digits are in the evaluation of $2^{132049} - 1$.

Solution to Puzzle No 109

Using the formula given $P = n^2 - 79n + 1601$ successive values of p are computed and checked to see if they are prime.

10 FOR N = 1 TO 100 20 LET P = N * N - 79 * N + 1601 30 FOR X = 2 TO SQR P 40 IF P/X = INT (P/X) THEN PRINT N: " "; P: GOTO 60 50 NEXT X 60 NEXT N

Remarkably, the formula is very accurate. It only fails for five values when n is in the range 0 to 100.

These values are 80, 81, 84, 89, and 96.

Winner of Puzzle No 109

The winner is: T J Vernon, Ruslington Close, Lower Earley, Reading, who receives £10.

Rules

If the puzzle can be sensibly solved using a computer then the winner will have included a listing of the program used to find the correct answer. The closing date for entries to Puzzle No 114 is July 20.

The Hackers

Automata is pleased to announce the winners of

"MY NAME IS UNCLE GROUCHO YOU WIN A FAT CIGAR"

We want to thank everyone who entered into the spirit of the game and took part all over the world, for making it all worth while. At last, the moment you've all been waiting for:

THE IDENTITY OF THE MYSTERY PERSONALITY IN

THE PROGRAM WAS . . .

MICKY MOUSE

COMPETITION WINNERS

FIRST PRIZE OF THE CONCORD-02 VOYAGE TO NEW YORK AND HOLLYWOOD WITH WADS OF SPENDING CASH to Mr. P. A. Daley of Stoke-on-Trent for his winning slogan "THERE'S NO BLOOD IN OUR GAMES, IT'S ALL TOMATA SAUCE!"

SECOND PRIZE to J. McNally of Belfast for "YES, BUT CAN THE STEAM ENGINE DO THIS?"

THIRD PRIZE to I. Walker of Barnsley for "AUTOMATA BEATS THE HELL OUT OF VIOLENT GAMES"

PRIZE FOR THE WORST SLOGAN WITH A CORRECT ANSWER to S. M. Morris of Mid-Glamorgan for "GAMES STARRING THE PIMAN, FANTASTIC BUY ONE, JUST AUTOMATICALLY GOOD"

PRIZE FOR OVERSEAS WINNER to Nabil Shehayed of Quater, Arabian Gulf.

PRIZE FOR SAUCIEST PRINTABLE SLOGAN to M. Kennedy, R.A.F. Honington for "IF LADY CLAIR WON'T LET YOU PLAY, YOU OUGHTA MATA."

PRIZE FOR THE MOST INCOMPREHENSIBLE SLOGAN to Stephen Guy of Bolton for "AUTOMATA, VIOLENCE AND SHOOT EM UP GAME OUT FUN AND A"

PRIZE FOR SHORTEST SLOGAN WITH A WRONG ANSWER to Kutsche of Bremen, Germany for "

JOINT RUNNERS-UP FOR THE SHORTEST SLOGAN WITH A WRONG ANSWER to David Grimshaw of Guildford and Hervard H. Merved of Denmark for "

SPECIAL PRIZE FOR BAD TASTE SLOGAN WITH THE WRONG ANSWER to David Ahrens of Gravesend for "AUTOMATA TOOK THE 'P' OUT OF COMPUTING."

SPECIAL PRIZE FOR THE MOST INCORRECT SOLUTION to Johnathon Perry of Cornwall for "ELIZABETH TAYLOR"

RUNNER-UP FOR THE MOST INCORRECT SOLUTION to John Cole of Alton for "JAMES STEWART"

Congratulations to everyone. Hope you like the Automata bags of goodies and surprises, and to the outright winner, we hope your dreams come true for you and your companion in the U.S. of A. Finally, to those of you who didn't win, remember "it's not the winning that's the thing, it's playing the game"

with love from

Uncle Groucho
